Protect your well water from freezing temperatures

It's that time of year again. One day it's 80 degrees and the next morning the temperature is below freezing. You know what they say about East Texas weather: If you don't like it, wait a minute, and it will change. When it comes to freezing water pipes, a small amount of prevention is better than the alternative.

Protecting the well:

Wrap your pressure tank with insulation and cover the pump if its above the surface. If you have a well house, using a small space heater or even a light will help. (use an incandescent bulb. LED and florescent bulbs don't generate heat) Use pipe insolation on all pipes that are above ground. Heating tape can also be used to protect pipes.

Protecting outside faucets:

The home supply store will have a large supply of insulated faucet covers if you get there early. None if you get there late! The foam pipe insulation can be cut to fit faucets

and is a cheep alternative. In a bind I have been known to use old athletic socks and "duck" tape. "Duck" tape is good for just about everything.

Protecting inside faucets:

When the temperature drops below freezing it's a good idea to drip at least one faucet in the house and open the cabinet doors under sinks (especially sinks on exterior walls. Definitely on the northern facing wall) The open cabinet doors will allow heat inside the house to warm the pipes under the sinks. Be sure to move all hazardous chemicals stored in the cabinets out of the reach of small children and pets.

Protecting your water bill:

After a freezing event, be sure to shut off all water using devices inside your house and go out and check the water meter. If the meter indicates that water is flowing, you may have a leak. An unchecked water leak can drive your water bill up quickly. You may need the help of a licensed plumber at this point.

Wells in PGCD Database 12/31/2021

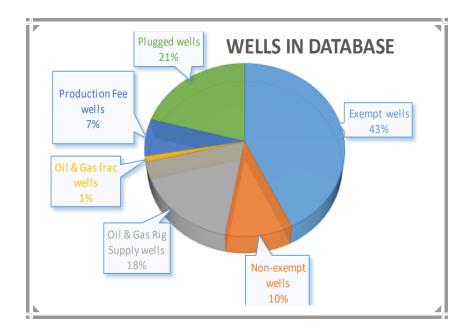

19 exempt wells and 5 nonexempt well in progress

Total Exempt wells in database – 1269

Total Non-exempt wells in database– 294

Total Production fee based wells– 206

Total District wells recorded—2,956

"If you think about what you ought to do for other people, your character will take care of itself." Woodrow Wilson

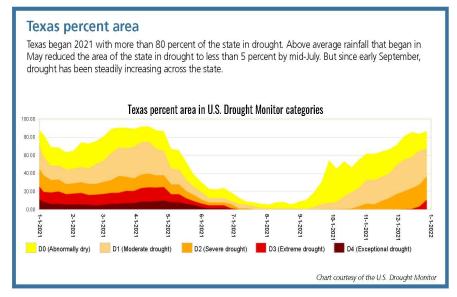

RULE 6 – REQUIREMENT OF DRILLERS LOG, CASING AND PUMP DATA

(a) Complete records shall be kept and reports thereof made to the District concerning the drilling, maximum production potential, equipping and completion of all wells drilled. Such records shall include an accurate driller's log, any electric log which shall have been made, and such additional data concerning the description of the well, its potential, hereinafter referred to as "maximum rate of production" and its actual equipment and rate of discharge permitted by said equipment as may be required by the Board. Such records shall be filed with the District Board within 60 days after completion of the well. (b) The well driller shall deliver either in person, by fax, email, or send by first-class mail, a photocopy of the State Well Report to the District within 60 days from the completion or cessation of drilling, deepening, or otherwise altering a well. (c) No person shall produce water from any well hereafter drilled and equipped within the District, except that necessary to the drilling and testing of such well and equipment, unless or until the District has been furnished an accurate driller's log, any electric log which shall have been made, and a registration of the well correctly furnishing all available information required on the forms furnished by the District.

Conservation Tip:

Know how to and read your water meter monthly. If you know what your average monthly water use is, you can quickly spot unusual increases and look for the cause. A leaky toilet or a broken sprinkler head can run a water bill up quickly.

Water Weekly For the week of 01/03/22 Water conditions December 2021 was one of the warmest and driest Decembers on record for Texas. As a result, the latest map for conditions as of December 28 shows continued expansion and intensification of drought. Extreme drought now covers more than 10 percent of the state. **Drought conditions** ♦ 67% now Intensity ♦ 65% a week ago D0 abnormally dry ♦ 7% three months ago D1 drought - moderate ♦ 81% a year ago Map courtesy of the U.S. Drought D2 drought - severe

D3 drought - extreme

D4 drought - exceptional
